

**Department of ECE**  
**Sessional-I(CS & ECE)**

Course Name: **Embedded System**  
Course Code: **BET-C610**

MM: **20**  
Time: **60 minutes**

**Section A**  
(Short Answers)

*Note: Attempt any two questions selecting one from each course outcomes (COs). Each carry 6 marks*

| Question No. | Question Statement                                           | COs  | Bloom's Taxonomy Level |
|--------------|--------------------------------------------------------------|------|------------------------|
| 1            | Define the use of watch dog timer in embedded system design  | CO-1 | L-1                    |
| 2            | Analyze any three real time operating system in short        | CO-4 | L-4                    |
| 3            | Define the roll of microcontroller in embedded system design | CO-1 | L-1                    |
| 4            | Analyze in short Embedded Design life cycle with diagram.    | CO-4 | L-4                    |

**Section B**  
(Long Answers)

*Note: Attempt any one question selecting one from each course outcomes (COs). Each carry 8 marks*

| Question No. | Question Statement                                                          | COs  | Bloom's Taxonomy Level |
|--------------|-----------------------------------------------------------------------------|------|------------------------|
| 1            | Define hardware and software partitioning and co-design, discuss in detail. | CO-1 | L-1                    |
| 2            | Analyze the following (1) open collector output (2) Tri state Buffer        | CO-4 | L-4                    |
